Adopt fast flow with Conflux

Outcomes and ways of working for medium and large enterprises

conflux

v1 2023

conflux

- Nearly 80% of organizations worldwide are still struggling to make effective use of cloud, DevOps, and other modern approaches to software and IT delivery.*

- To become competitive and effective, high-performing organizations are adopting flow-centric, digital-first operating models.

- By focusing on fast flow and Team Topologies, organizations are discovering true business agility.

* Puppet State of DevOps Report 2021

Adopting fast flow with Conflux leads to:

- A realized **operating model** where digital capabilities provide true **business agility**.

- Enhanced **capabilities** within the organization to support **end-to-end value delivery**.

- An organizational model that is **focused on the human**, rather than processes.

- Increased workforce **engagement** through **meaningful team-based work**.

- Increased **efficiency** through adjusted responsibility boundaries (flow efficiency).

- **Cost reduction** as a consequence of the new operating model: reduced rework, better flow (fewer handovers), focused **innovation**, and more effective platforms.

- Increased capability for **sustainable change** and evolution of the organization.

conflux

Conflux runs catalyst sessions that help you to:

- Implement a new **operating model** by defining operating constraints and adjusting key boundaries. We use **Team Topologies**, DevOps principles, Domain-Driven Design (DDD), Wardley Maps, psychological safety, modern engineering practices, social practices, and related approaches.

- Adjust **supplier contracts** to encourage fast flow and service ownership.

- Adopt a "fast flow" **mindset** across ExCo, management, and practitioners.

- Interpret and use patterns from **Team Topologies** effectively.

- Define **skills pathways** for staff across different roles to increase focus on fast flow, team-centric ways of working, and cloud readiness.
